

PRESS IN ARTIFICIAL INTELLIGENCE

FRAMEWORK FOR DEVELOPING AND EVALUATING AI SYSTEMS

WHAT IS PRESS?

Definition:

PRESS is a framework used in Artificial Intelligence (AI) to guide the development and evaluation of AI systems.

Acronym: PRESS stands for Problem, Requirements, Engineering, Safety, and Success

PROBLEM (P) & REQUIREMENTS (R)

PROBLEM:

- Define the problem or opportunity
- Identify goals, objectives, and key performance indicators (KPIs)
- Image: a diagram showing a problem statement

REQUIREMENTS:

- Identify requirements and constraints
- Data, computational resources, regulatory considerations
- Image: a diagram showing requirements gathering

ENGINEERING (E) & SAFETY (S)

Engineering (E)

- Design and develop the AI solution
- Data preparation, model selection, training, and testing
- Image: a diagram showing the engineering process

Safety (S)

- Ensure the AI system is safe and secure
- Bias, fairness, transparency, explainability

SUCCESS (S)

Success (S)

- Evaluate the success of the AI system
- Performance metrics, user acceptance, continuous improvement
- Image: a diagram showing evaluation metrics

BENEFITS OF PRESS

- Ensures comprehensive consideration of AI development aspects
- Improves AI system effectiveness, safety, and success
- Facilitates communication among stakeholders

Case Study:

Example of PRESS application in a real-world AI project- Image: a diagram or graph showing the case study results
