ATLAS in Artificial Intelligence

Introduction

- ATLAS (Autonomous Learning and Transfer Acquisition System) is a type of artificial intelligence (AI) system designed to learn and adapt in complex environments.
- The primary goal of ATLAS is to enable AI agents to learn from experience and transfer knowledge across different tasks and domains.
- A software framework for building artificial intelligence (AI) applications.
- Enables efficient development and deployment of AI models

The background of the slide features several thin, curved lines in a light gray color, some solid and some dashed, creating a sense of motion or a stylized globe. On the left side, there is a large red speech bubble shape with a tail pointing towards the bottom left. Inside this bubble, the text 'features of ATLAS' is written in white, lowercase letters. The bubble is composed of two stacked rectangular sections.
