

Advantages of AI

1) High accuracy with less error

AI machines or systems are prone to less errors and high accuracy as it takes decisions as per pre-expensive or information.

2) High Speed

AI systems can be very high speed and fast decision making because of that AI systems can beat a chess champion in the class game.

3) High Reliability

AI machines are high reliable and can perform the same action multiple times with high accuracy.

4) Useful for risk areas

AI machines ~~are~~ can be helpful in situations such as defusing a bomb, exploring the ocean floor, where to employ a human can be risky.

Disadvantages of AI

1) High Cost

The hardware and software requirement of AI is very costly as it requires lots of maintenance to meet current world requirements.

2) No Feelings and Emotions

AI machines can be an outstanding performer, but still it does not have the feelings so it cannot make

any kind of emotional attachment with humans, and may sometime be harmful for user if the proper care is not taken.

3) Increase dependency on machine

With the increment of technology, people are getting more dependent on device and hence they are losing their mental capabilities.

4) No original creativity

As humans are so creative and can imagine some new ideas but still AI machine cannot beat this power of human intelligence and cannot be creative and imaginative.

Artificial Intelligence Techniques

In the real world, the knowledge has some unwelcomed properties:

it's volume is huge, next to un-imaginable.

it is not well organized or well formatted.

it keeps changing constantly

AI technique is a manner to organize and use knowledge efficiently in a way

it should be perceivable by the people who provide it.
it should be easily modifiable to correct errors.

It should be useful in many situations though it is incomplete or inaccurate.

History of AI

1943:-

Foundations for neural network laid...

1945:-

Isaac Asimov, a Columbia University alumni, coined the term robotics.

1958:-

John McCarthy invents Lisp programming language for AI.

1979:-

The first computer controlled autonomous vehicle, Stanford cart was built.

1985:-

Harold Cohen created and demonstrated the drawings programs, Aaron.

DATE: _____

DAY: _____

1997

The deep Blue chess
program beats the world's
chess champion.
